

GreenIQ Flow Meter

Get Water Alerts From Your Garden

A flow meter is a crucial component to make your smart garden smarter. Until you have a sensor on your pipe, you really don't know how much water you are using – and possibly wasting. A slow leak can waste thousands of gallons water without anyone realising it. And knowing that your pipes are not flowing as fast as they should be is also important, actionable information.

Use the GreenIQ Flow Meter to keep tabs on your watering habits and detect possible problems. It sends data back to GreenIQ Smart Garden Hub through a wire after being connected in-line to an irrigation pipe.

The meter reports gallons/liters of water used to the controller, making the data available in the GreenIQ app. The meter also helps you keep tabs on leaks, pipe breaks and slow water flow by alerting you through the app.

The flow meter comes in two sizes, 3/4" and 1" and in two standards, NPT for USA/Canada and BSP for Europe/Australia/Japan/Israel.
